

# NWAudit-Gaming

This is a complete software suite designed to audit and store gaming documents by unique type and casino department:

- Cage
- Kiosk
- Soft Count
- Jackpot/Fill
- Credit/Fill
- Scrip
- TITO
- W2G

The process begins with scanning the documents to capture a digital image. In the Cage, Kiosks and Soft Count the system creates a tape total report by document type, shift and gaming date. This step virtually eliminates balancing errors.

Accounting now audits the digital data against your host casino systems (ATI, IGT, SDS and ACSC). Imagine having the capability to verify a jackpot and a W2G together on one screen! System generated reports are complete with auditing and history formats. They can also be exported in Excel and PDF formats.

Once auditing is complete, the images are stored on optical media - so you don't have to keep the paper. Soft Count results can also be exported to your host casino systems.

Other available features include an interface to high speed money sorters for cash and TITO slips. Use it with *IDCapture* and you can verify signatures and customer IDs on the screen as well.
