

High-speed Automatic Coin Sorter

SS-20/21/30

Multi-featured, high-speed coin sorting
with superb precision and reliability

Multi-featured, high-speed coin sorting with superb precision and reliability

Glory's high reputation among customers has been built by its expertise in supporting businesses which rely on precision coin processing, counting, sorting and wrapping. Borrowing from the superior

technology of Glory high-speed coin wrapping machines, the Glory SS-20/21/30 Sorter performs high-speed coin sorting of 2,000 a minute with great precision and reliability.

Fast and Reliable

The SS-20/21/30 ensures high-speed counting and sorting of 2,000 coins per minute with a highly reliable belt conveying system. An automatic stop mechanism is also built-in to automatically stop the machine when the counting finishes.

Accurate Bag Stop

The standard bag stop function discontinues coin counting at the exact number. The number of bag stops can be selected in a choice of 3 modes: Full, half of an FRB Standard Bag, or programmable from 1 to 9,999.

System Integration

The SS-20/21/30 can be used both as a coin sorter, and part of a cash settlement system for cash vaults and/or coin change systems at casino redemption booths.

Large Operation Panel

The operating keys are integrated in a large panel with the LED display to ensure fully accurate operations. The large, easy-to-read display shows amount or piece count totals for each denomination, including grand totals or individual bag totals. Also, by connecting an optional printer, all count data can be printed out.

Product Line

The SS-20 can count, sort, and deposit all 6 U.S. coin denominations in bags, while the SS-21 deposits them in coin boxes. The SS-30 is specially designed with a double bagging chute for casino application. Three models are available according to your specific needs.

Options

- External display
- Printer
- Lift tray
- Interface kit to Glory cash settlement systems.

SS-21

Specifications
